

2011 Community Health Assessment

Community Assessments are an important tool to improve your health. The environment and resources available in the community affect the decisions all of us make on a daily basis. The collection of this data is anonymous and will be shared with the public in a user friendly format. The goal of this assessment is to create a profile of our community, to find our strengths and weaknesses so we may improve our individual and public health.

Your opinion counts, please participate in this survey and encourage others to take the survey too. *(It only takes 15 minutes to make your voice heard!)*
